ABSTRACT

The present investigation was expected to look at narcissism among tip top and sub-tip top soccer players. 50 male football players, speaking to the groups who have positioned in top three positions in a national dimension competition were chosen and gathering in as tip top soccer players. Another arrangement of 50 intercollegiate male football players were additionally chosen and assembled in as sub-tip top male soccer players. The age scope of chose subjects was 18 to 28 years. Irregular testing technique was utilized for determination of test in the present investigation. To evaluate narcissism, Hindi adaptation of Raskin and Hall's Narcissistic Personality Inventory (NPI) arranged by Helode, Hasan and Helode (2002) was utilized. It was discovered that world class male soccer players have more extent of narcissistic inclinations when contrasted with sub-tip top male soccer players at .01 dimension of measurable importance. Based on results and related discourse it was inferred that world class male soccer players have more size of narcissism when contrasted with sub first class male soccer players.

KEYWORDS: *Narcissism, elite, sub-elite, soccer.*

1. INTRODUCTION

Affectedness, prevalence, privilege, exploitativeness, authroity, egotism and absence of compassion separately make narcissism. Freud (1914) thought of narcissism as the "Adoration for oneself", as far as the libidinal drive. Present day sportsperson have loaded with exhibitionism. Satellite viewership likewise make sportspersons progressively well known. In games narcissistic propensities are on the ascent.

Emmons (1987) opined that narcissism creates as a reaction to over assessment, a player's sense of self might be helped by fan praise and attention. Players report that one of the prizes for playing is a decent mental self portrait, some portion of which is feeling a "top dog" and even male secondary school understudies get high societal position from games (Figler, 1981). In this setting it is beneficial to survey narcissism in first class male soccer players on the grounds that as far as ubiquity, cash and exhibitionism soccer don't come next to any game. Shockingly narcissism has been considered widely by analysts, for example, Porcerelli and Sandler (1995), Foster (2003), Rubinston (2003), Mirsafian, H.R. (2008), Tazegul and Aytakin (2013), Matosic (2016) however not explicitly in a populace of first class sportspersons of a standout amongst the most prominent games on the planet. Subsequently the scientist chose to survey narcissism in tip top male soccer players.

The present examination was intended to think about narcissism among tip top and sub-world class soccer players. It was likewise speculated that world class male soccer players will indicate more extent of narcissistic propensities when contrasted with sub-tip top male soccer players.

2. METHODOLOGY

2.1 Sample:

For present investigation, 50 male soccer players, speaking to the groups who have positioned in top three positions in a national dimension competition were chosen and gathering in as world class soccer players.
